

# Here's your new **GREEN BIN!**

**NEW**

## **Important to know:**

- Start using the new bin on your next collection day.
- We will no longer collect from the old Green Bin.
- Removal of your old bin should happen same day you get your new bin. If you missed this pick up, set your old **EMPTY** Green Bin out at curb on your next collection day. If you miss this second pick up day, then call 311 to arrange removal.
- Do not put yard waste in the Green Bin - yard waste is collected and processed separately.

## **The way you position your new Green Bin is very important!**

- Set it out for collection with the opening of the lid facing the street.
- The bin must be set out squarely facing the street so the automated collection arms can grip the bin to lift, tilt and empty.

## **Our collection operation can only work when the bin is set out like this:**

**Opening of lid  
faces the street**

**Street**

## **The new latch makes the bin easy to use.**

- Turn the dial either right or left to the unlock position to open the bin.
- Place the bin at curbside in the locked position.
- The gravity lock will automatically release when the bin is collected and tilted over the truck.

See back side for more information.

# In addition to food scraps, don't forget to put these organic materials into the Green Bin:

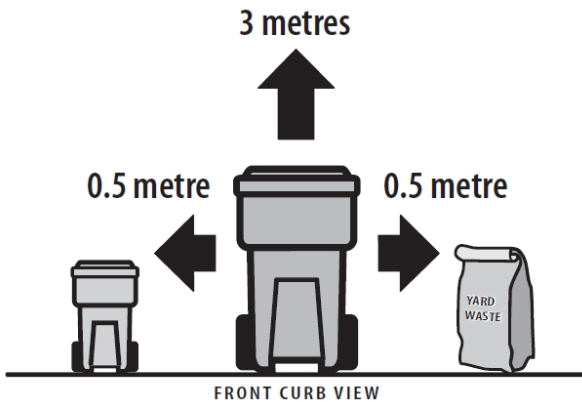

- Diapers and sanitary napkins
- Tissues, paper towel, toilet paper
- Paper ice cream containers

## Key Features

- New bins are more animal resistant – bins can be stored outside and set out the night before collection with the lid in locked position.
- No need for overflow bags of organics - this larger bin can hold more organics. It's larger to meet automated collection requirements.
- Keep your new bin clean by washing it out or hosing it down when needed.

## Automated collection needs space and proper set out

## Contact 311, if you . . .

- have concerns with your new Green Bin;
- need another new Green Bin;
- need bin repairs or replacement.
